# 1 Service interfaceBridgeManagement

Version 1.0.0, provider TestTranslation, base path `/testtranslation`. Metadata `interfaceBridge.from = [generic_https]`, `interfaceBridge.to = generic_https` (the TranslationManager's lookup requirements: `from` CONTAINS_ANY the consumer's templates, `to` IN the target's templates).

| Operation | Behaviour |
|---|---|
| `check-targets` | `{targetOperation, targets:[{instanceId, interfaces}]}` → `{targets}`: the reachable targets with their usable interfaces. |
| `initialize-bridge` | `TranslationBridgeInitializationRequestDTO` → the bridge interface (`ServiceInstanceInterfaceResponseDTO`). |
| `abort-bridge` | path parameter bridge id appended to the registered path; ends the bridge. |
